

# Sharp Ply: Incorporating Sharp Strategies

The company also offers H-Beams in its product umbrella...

Since the inception of the company in 2001 by **Founder and Managing Director Paras Kumar**, one of the major objectives of Sharp Ply is to constantly add to product range with the principle of innovation. Their vast portfolio of products includes varieties of shuttering solutions, runner solution, door and framing solutions.

Pioneering the market in innovation, Sharp Ply had introduced Laminated Veneer Lumber (LVL) to cater to the

diverse need of the Indian market in the optimum way it required.

Understanding the need of the hour and taking another step towards the future, Sharp Ply in association with Mywood, Germany are now equipped with imported H20 Wooden Beams.

Their association brings to you imported EN13377 Certified beams readily available in various lengths.

Co-operation between the two companies has brought immense value to the table for their existing clientele as well as others looking for the best solution in the Indian market as they have recently launched imported H16 Formwork Beams.

Mywood studying the Indian market along with Sharp Ply understands that the local conditions only require the

technical specifications of H16 girders and is constantly pushed towards H20 as there is lesser availability of quality H16 beams. Cost implications between the two projects for the H16 will have great economic impact.

Time, a constraint which requires everything to be available by the need of the hour or as said in the construction Industry 'the requirement is of yesterday'. Sharp Ply looks to tackle the same by keeping both the product available in sizeable quantum hoping to venture this line to optimum.
